DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The examiner suggests "Driving Mechanism Using Shape Memory Allows including a Magnetic Latch".

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Esashi et al. (Esashi)(JP 2001-265213). Esashi teaches a device having a first and a second shape memory alloy coils 132, 134 physically connected mutually in series in the axial direction of the pin drive member 111 and a fixing member 152, 154 is provided on one common substrate 150. Esashi teaches a magnetic latch 164 to hold the drive member 111 and a drive circuit 250, 200 to supply electricity to the first and the second shape

Art Unit: 2834

memory alloy coils 132, 134, where the magnetic latch is made of a magnet plate 185 and a plurality of magnetic bodies 126, 128 provided to the drive member 111, such that the drive member is connected to the first and the second shape memory alloys coils and extending in the axis direction of the pin 111, where the first and the second shape memory alloy coils 132, 134 are selectively 250 heated by electrical driving by the drive circuit 200, such that the drive member 111 is moved in the axis direction by compressing or extending of the heated first or the second shape memory alloy coils 132, 134, and the drive member is fixed and held in the axis direction by magnetically fixed to the magnetic latch at 126/185 or 128/185.

Allowable Subject Matter

5. Claims 4, 5, 6(4) and 11-17 are allowed.
6. Claims 2 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl I.E. Tamai whose telephone number is (571) 272 - 2036.

The examiner can be normally contacted on Monday through Friday from 8:00 am to 4:00 pm. If attempts to reach the examiner by telephone are unsuccessful, the
